---

### SUMMARY

A Computer Science graduate from FAST NUCES, Karachi, specializing in AI/ML and intelligent automation systems. Experienced in building ML models and LLM-powered applications using Python, Scikit-learn, PyTorch, RAG pipelines, LangChain, and CrewAI. Completed focused coursework and hands-on projects in generative AI, retrieval-augmented generation, and autonomous AI agents.

---

### TECHNICAL SKILLS

- Languages: Python, MySQL, JavaScript
- C/C++, HTML, CSS
- Tech Stack: FastAPI, NodeJs, ExpressJS, React
- Infrastructure: AWS, Docker, Linux, Kubernetes
- AI / ML: Langchain, CrewAI, OpenAI SDK, RAG Systems

---

### PROFESSIONAL EXPERIENCE

#### Software Engineer Intern

Feb 2026 – Present

FastPace Dynamics

- Receiving structured training in Microsoft Dynamics 365.
- Learning CRM concepts, system configuration, and business workflows.
- Working in Backened workflows in Finance & Operations.
- Designed and facilitated workflows for International Clients.

#### IT Management Trainee

Jan 2026 – Feb 2026

MCB Bank Limited

- Analyzed complex business workflows and developed the understanding of banking system services.
- Developed understanding of cybersecurity frameworks, banking security standards, and real-world InfoSec workflows.
- Assisted the Information Security team in monitoring security controls, access management, and compliance with internal security policies and banking regulations.

## EDUCATION

### Bachelor in Computer Science

2022 – 2026

FAST - National University of Computer & Emerging Sciences

### Diploma in Cloud Native Agentic AI Engineering

2024 – 2026

PIAIC - Presidential Initiative For Artificial Intelligence & Computing

---

## CERTIFICATIONS

- Introduction to Deep Learning with PyTorch | DataCamp | 2025
  - Muti-AI Agent Systems with CrewAI | DeepLearning AI | 2025
  - LangChain for LLM Application Development | DeepLearning AI | 2025
  - Docker Training Course For Absolute Beginner | KodeKloud | 2025
- 

## PROJECTS

### Vigilant Driver: AI Based Driver Monitoring & assurance System

May 2026

Backend & AI Lead Developer

- It's a full-stack fleet safety platform (FastAPI backend, React/Vite dashboard, React Native driver app) that monitors sessions and triggers safety alerts.
- Includes an AI pipeline (Bi-LSTM-based fatigue/distraction classification and on-device inference) to classify driver drowsiness/distraction in real time.
- It includes ML training components and an AI advisor service, enabling companies to monitor drivers, manage vehicles, review sessions/events, and act on safety alerts.

### AI Powered Fake Job Detector

May 2025

AI Developer

- Developed a machine learning system to detect fraudulent job postings using multiple classification algorithms on labeled data. Applied text preprocessing and TF-IDF vectorization, evaluating models based on accuracy and performance metrics.

### Adversarial Robustness Analysis on MNIST Using CNN

Sep 2025

Developer

- Trained a CNN on the MNIST dataset achieving ~98% validation accuracy. Implemented FGSM and Gaussian adversarial attacks, observing a larger accuracy drop with FGSM (~6%) than Gaussian noise (~2%).

### Edge Offloading Decision System Using Machine Learning

June 2025

Developer

- Developed an ML-based decision model for intelligent cloud task offloading & built a GUI simulation tool achieving 94%+ accuracy for interactive task execution planning
- 

## AWARDS & CERTIFICATIONS

- Winner in Data Dash Competition.
- Holds multiple Certificates of Competitive Programming.
